

Angular in Hindi

Npm install

Install node

1. `npm install -g @angular/cli`
2. `ng new my-first-project`
3. `cd my-first-project`
4. `ng serve`

KINGS ENGINEERING

Install bootstrap Add on point for who using boot strap

`npm install -g @angular/cli@latest`

Npm install botstrap

`style`

`scss style.css`

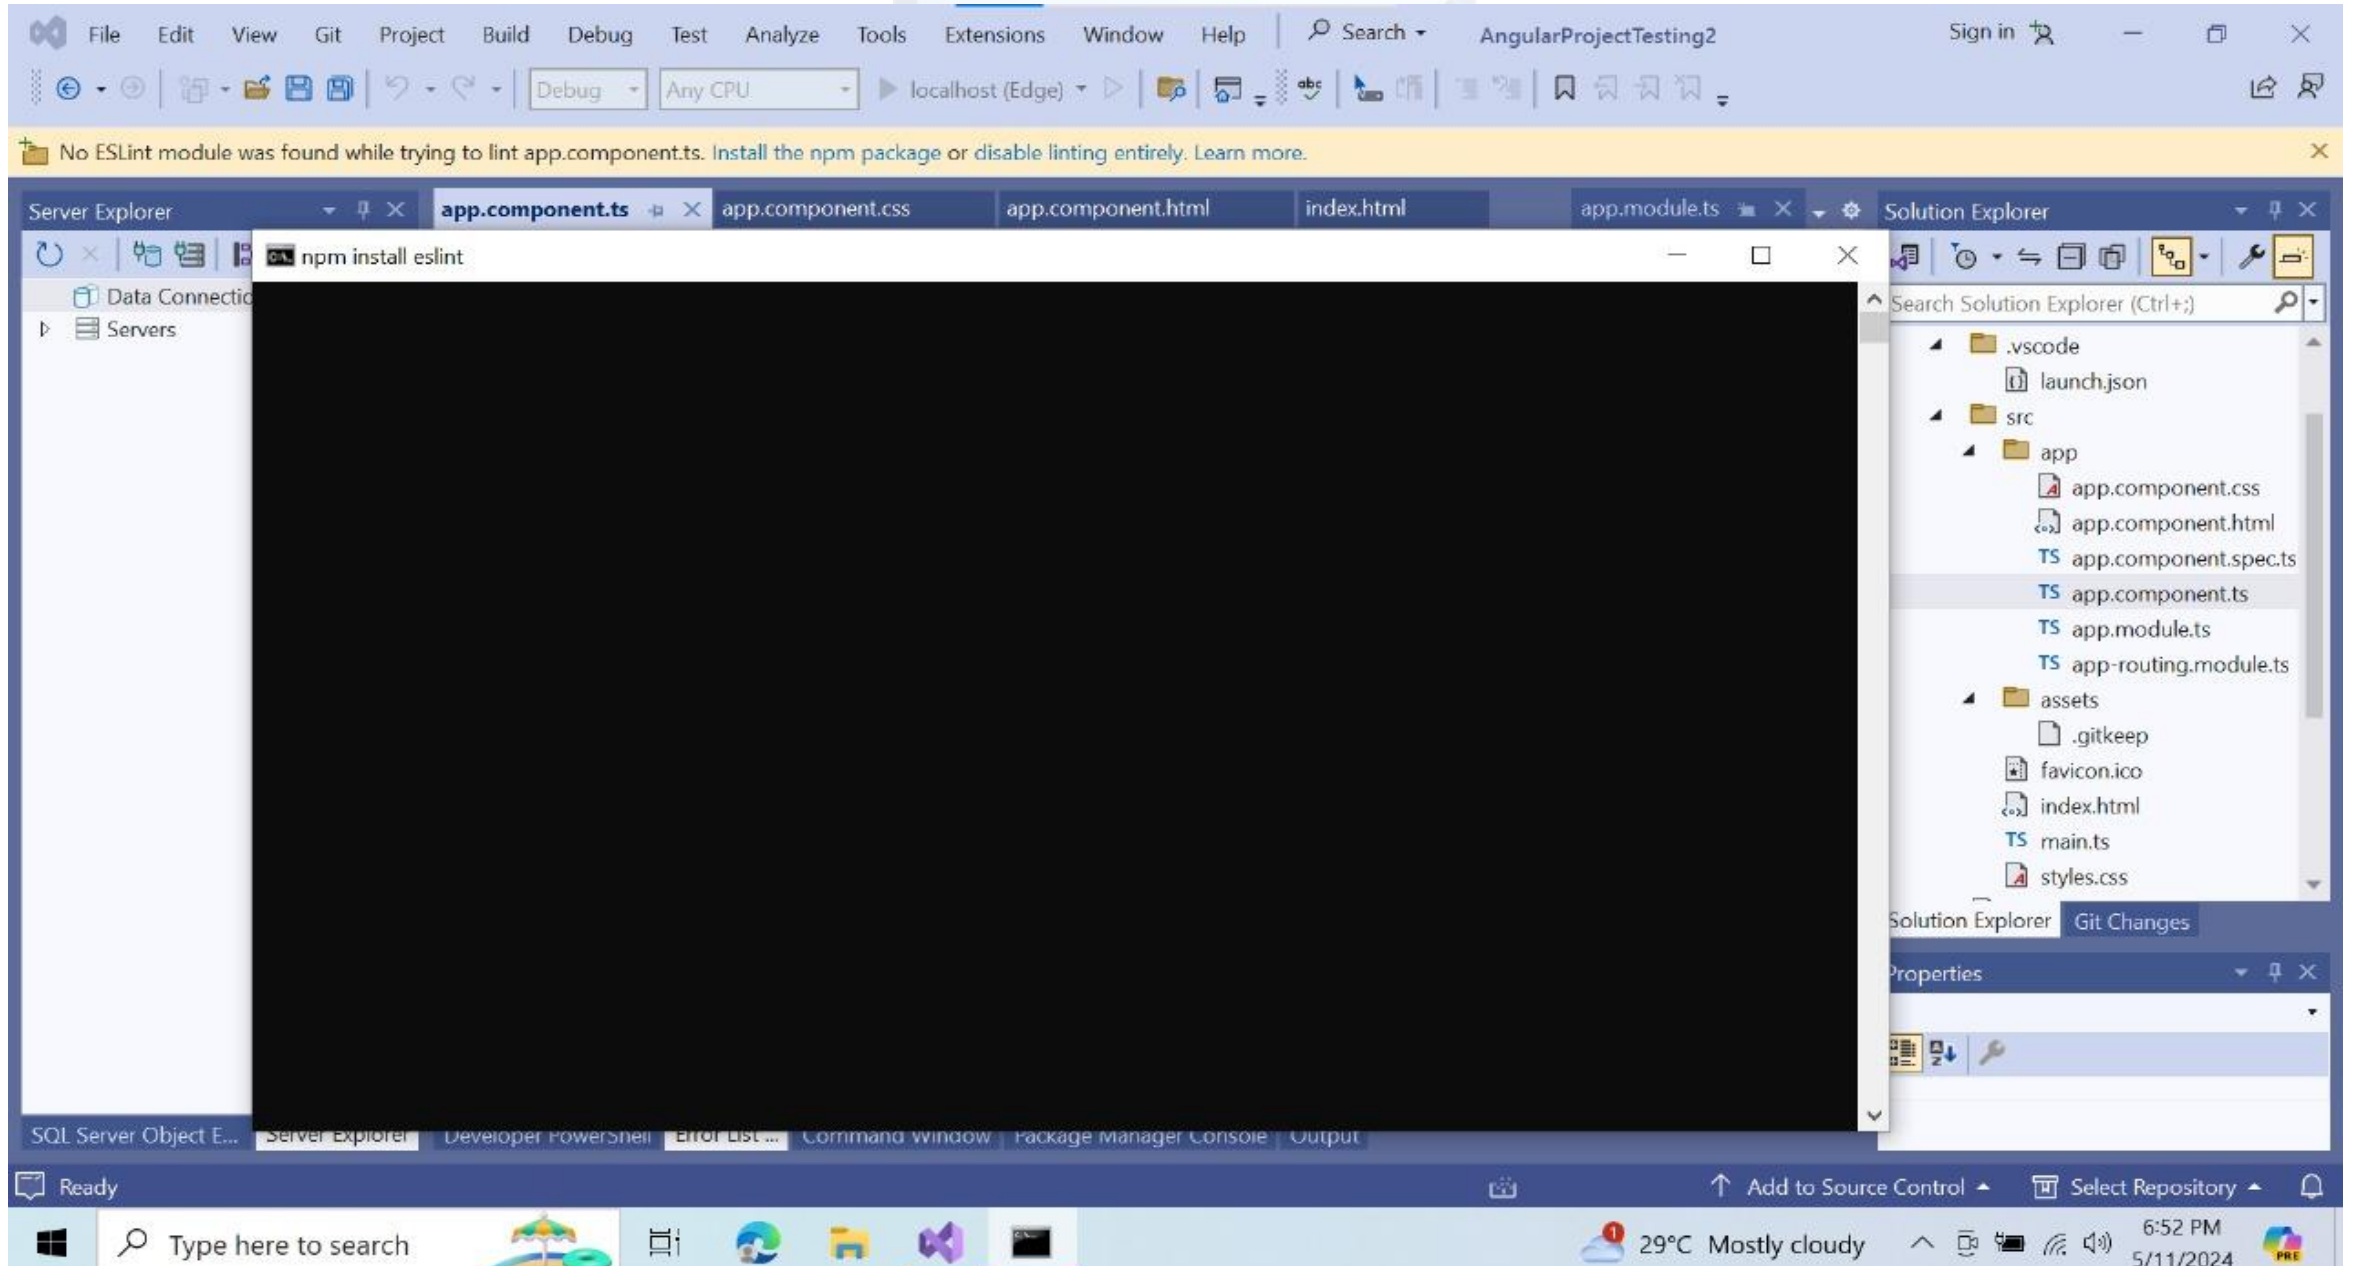

`node_modules bootstrap dist css bootstrap.css`

`scss`

`node_modules bootstrap dist css bootstrap.css`

KINGS ENGINEERING

Only refer if using Visual Studio

Only refer if using Visual Studio

Npm Install jquery

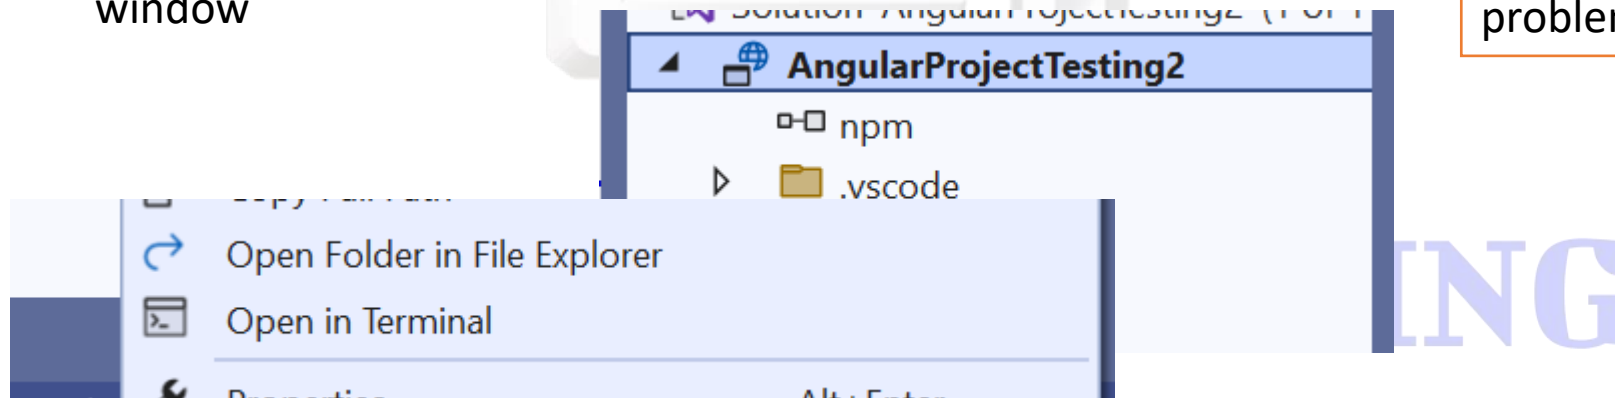

ng generate component mycomponent/newcomponents

ng generate component mycomponent/webcomponents >> Error: This command is not available when running the Angular CLI outside a workspace.

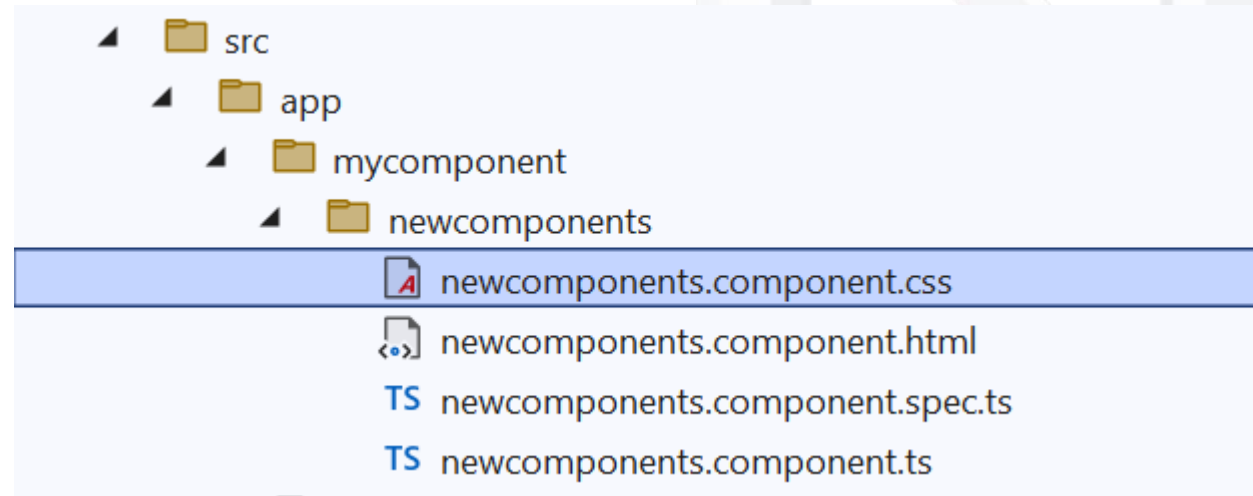

Open terminal by right clicking project in solution window

By doing this run command again and your problem resolve

New components are generated

ng generate component mycomponent/newcomponents

KINGS ENGINEERING

We have created one different component and we want to access in our root component

```
▼ new-component
  # new-component.component.css
  <> new-component.component.html
  TS new-component.component.spec.ts
  TS new-component.component.ts
```

Import in to
app.components

```
src > app > TS app.component.ts > ...
import { AppComponent } from './app.component';
import { RouterOutlet } from '@angular/router';
import { NewComponentComponent } from './new-component/new-component.component';

@Component({
  selector: 'app-root',
  standalone: true,
  templateUrl: './app.component.html',
  styleUrls: ['./app.component.css'],
  imports: [RouterOutlet, UserListComponent, NewComponentComponent]
})
export class AppComponent {
  title = 'AngularProject2';
}
```

Add component in html

```
<> app.component.html X TS app.component.ts # userl
src > app > <> app.component.html > div
  Go to component
1 <h1>Hello</h1>
2 <div>
3   <app-userlist></app-userlist>
4   <app-new-component></app-new-component>
5 </div>
6
```

ENGINEERING

Tailwind - css

<https://tailwindcss.com/docs/installation>

KINGS ENGINEERING

Route

www.page.com/something

Something is rout

Access routs

Navigates to routs

```
all-users.component.html TS app.routes.ts X
src > app > TS app.routes.ts > routes > path
4 import { UpdateComponent } from './CRUD/Pages/update/update.component';
5
6 export const routes: Routes = [
7   {
8     path: "",
9     component: AllUsersComponent
10  },
11  {
12    path: "add",
13    component: CreateUserComponent
14  },
15  {
16    path: "update",
17    component: UpdateComponent
18  }
19 ];
20
```

```
6 <main class="mt-16 ml-80">
7   <router-outlet></router-outlet>
8 </main>
```

```
<aside class="bg-slate-200 w-80 h-screen">
  <ul>
    <li routerLink="/" routerLinkActive="bg-blue-400 border-blue-500 border-1-4" [routerLinkActiveOptions]="{exact:true}">Home</li>
    <li routerLink="/add" routerLinkActive="bg-blue-400 border-blue-500 border-1-4" class="h-10 p-4">Add User</li>
    <li routerLink="/update" routerLinkActive="bg-blue-400 border-blue-500 border-1-4" class="h-10 p-4">Update User</li>
  </ul>
</aside>
```

Router link not working

Router outlet
not working

```
import { RouterLink, RouterLinkActive, RouterModule, RouterOutlet } from '@angular/router';
@Component({
  selector: 'app-cred',
  standalone: true,
  imports: [RouterOutlet, RouterLink, RouterLinkActive, RouterModule],
  templateUrl: './cred.component.html',
  styleUrls: ['./cred.component.css']
})
export class CREDComponent {
}
```

Import :

```
RouterOutlet, RouterLink, RouterLinkActive, RouterModule
```

NG

If we need to rename folder you have to change name here

```
rc> app > TS app.component.ts > ...
1  import { Component } from '@angular/core';
2  import { RouterOutlet } from '@angular/router';
3  import { AllUsersComponent } from '../CRUD/Pages/all-users/all-users.component';
4  import { CreateUserComponent } from '../CRUD/Pages/create-user/create-user.component';
5  import { AllUsersComponent_1 as AllUsersComponent } from '../CRUD/Pages/all-users/all-users.component';
6
7  @Component({
8    selector: 'app-root',
9    standalone: true,
10   templateUrl: './app.component.html',
11   styleUrls: ['./app.component.css'],
12   imports: [RouterOutlet, AllUsersComponent, CreateUserComponent]
13 })
14 export class AppComponent {
15   title = 'CourseAngular';
16 }
17
```

Page Design

- 1.Top bar – Main page
- 2.Side Nav Common for both pages
- 3.All user list - List with edit and delete function
- 4.Add user

The image shows a web application interface for 'Kings Engineering'. It features a top bar with the company name and a side navigation menu on the left. The side menu has three items: 'All', 'Add', and 'Update'. The 'Add' item is currently selected, highlighted in blue. The main content area displays a form titled 'Pls enter details' for adding a new user. The form includes two input fields: 'Enter user name' and 'Enter user age', followed by a blue 'Add User' button. The interface is styled with a light blue and white color scheme and includes a scrollbar on the right side.

Additional Information

The `*ngFor` directive was used in the template, but neither the `NgFor` directive nor the `CommonModule` was imported. Use Angular's built-in control flow `@for` or make sure that either the `NgFor` directive or the `CommonModule` is included in the `@Component.imports` array of this component.

import { NgModule, NgModule } from '@angular/core';

import { NgModule } from '@angular/core';
import { NgModule } from '@angular/core';

KINGS ENGINEERING

Additional Information

```
@switch(name){  
  @case('Mohan'){  
    <div>Hello Mohan</div>  
  }  
  @case('Ram'){  
    <div>Hello Ram</div>  
  }  
  @case('Sohan'){  
    <div>Hello Sohan</div>  
  }  
}
```

KINGS ENGINEERING

Update user -popup

```
<div class="flex items-center flex-col w-full h-full bg-white">
  <p class="bg h-10 m-10 font-bold bg-slate-50">Pls Update
details</p>
  <div class=" w-60 h-10 ml-auto mb-10">
    
  </div>
  <div class="bg-slate-300 rounded-3xl pl-20 pr-20 pt-10 pb-10
flex flex-col items-center">
    <input class="w-80 h-12 rounded-xl border-2 border-blue-700
pl-4" [(ngModel)]="userName" >
    <input class="w-80 h-12 mt-6 rounded-xl border-2 border-
blue-700 pl-4" [(ngModel)]="userAge">
    <button class="w-60 h-12 mt-6 rounded-3xl bg-green-400 font-
bold text-white" (click)="updateUser()">Update Dtails</button>
  </div>
</div>
```

If your facing double input box in Html / css

```
<input type="text" class="w-48 h-10 rounded-md  
p-4 border-black" placeholder="Enter  
text"><input>
```

To avoid double input box just remove <input>
